

Task & Expense Management System

Software Requirement Specification (SRS)

1. Project Overview

Objective:

Develop a web-based system to manage projects, tasks, employees, expenses, approvals, and notifications while learning software engineering principles like ACID, SOLID, DRY, KISS, YAGNI, and MVC architecture.

2. Technology Stack

Frontend: HTML, CSS, Bootstrap, React.js (Optional)

Backend: FastAPI/Node JS / Preferred

Database: MS SQL Server / MySQL

API Testing: Postman

Version Control: Git

3. User Roles

Admin:

- Manage users
- Manage projects
- View reports

Manager:

- Assign tasks
- Approve expenses

Employee:

- Update tasks
- Add expenses

4. Functional Requirements

Authentication Module:

- Login
- Logout
- Session management

Project Module:

- Create/Edit/Delete Projects

Task Module:

- Assign tasks

- Update task status

Expense Module:

- Add expenses
- Upload bills
- Approve/Reject expenses

5. Non-Functional Requirements

- Secure password hashing
- SQL Injection prevention
- MVC architecture
- Maintainable and scalable code
